- **STUDENT NAME -:** PRATIK
- **REG.NO -:** 25BEC10098
- **BRANCH -:** B.TECH ELECTRONICS AND COMMUNICATION ENGINEERING
- **COURSE-:** CSE0001 - DIGITAL LITERACY
- **FACULTY -:** Dr. KANNAN
- **SLOT -:** B23
- **SEMESTER -:** WINTER SEMESTER 2026
- **DATE -:** 31 MARCH 2026

Introduction

This project is based on my role as a Student Digital Ambassador, where I am responsible for helping my peers navigate the digital world effectively and responsibly. In today's environment, having a strong digital presence and good online communication skills is essential for academic and professional growth. Through this project, I explored key areas such as building professional profiles on platforms like GitHub and LinkedIn, practising coding skills on Hacker Rank, and using collaboration tools like Google Forms and Google Sheets.

Additionally, the project focuses on email etiquette, responsible social media use, and awareness of cybercrime. The overall goal is to develop practical digital skills and promote safe, professional, and effective online behavior among students.

Task 1:Create a Digital Literacy Awareness Infographic

For this task, I used canva to design the infographic named “Digital Literacy Awareness” which shows the easy guide to the modern world tech in three sections, which is specially tailored for students. The three section is:-

a)Defining digital literacy:
Digital literacy is more than just knowing how to use a computer. The graphic defines it as the complete skillset required to find and evaluate information online and create and communicate ideas effectively using digital tools.

b)Essential Tools for students that help them to stay organized and productive:
Google Calendar: For time management.
Cloud Storage: To save and access files from anywhere.
Note-taking Apps: To write the ideas and study more efficiently.
Zoom: To stay connected with classmates and teachers.

c)Safe internet Practice that helps them to protect their digital data like:
Password Security: Use strong passwords that mix letters, numbers, and symbols.
Always "think before you click" by verifying links and senders.
Privacy: Protect personal information and share only what is necessary.
Control your passwords and capture links and senders.

In This task I learned about helped me understand how to communicate effectively using visuals instead of long text. The most challenging part was balancing design content and also ensuring the infographic looked attractive while still being informative and clear.

Task 2:Build Your Student Digital Portfolio

I created and updated profiles on GitHub, LinkedIn, and Stack Overflow as part of building my professional digital presence. Each platform serves a distinct purpose. GitHub is used to showcase projects, manage code repositories, and collaborate with other developers. LinkedIn serves as a professional profile where I can present my education, skills, and achievements while connecting with recruiters and professionals. Stack Overflow is a community-driven platform where developers ask and answer programming questions, helping each other solve technical problems.In this task i learned about how we make connections with others and approach the coordinators for internship or any job opportunity.

Over the next four years, I plan to use GitHub to regularly upload my academic and personal projects to build a strong portfolio. On LinkedIn, I will keep my profile updated, grow my network, and engage with industry-related content. On Stack Overflow, I aim to improve my problem-solving skills by asking questions when needed and contributing answers as I gain more knowledge. These platforms together will support my learning, enhance my visibility, and prepare me for internships and future career opportunities.In this task i learned about how we make connections with others and approach the coordinators for internship or any job opportunity.

Task 3:Explore Coding & Collaboration Platforms

Part A: Coding Practice:
In Part A, I make account on Hacker Rank(which is a popular technology hiring platform and coding community that allows developers to practice programming and companies to evaluate technical skills. It provides online coding assessments, challenges, and contests, covering algorithms, data structures, SQL, and various languages, used extensively for remote interviews and technical hiring.) and solve the problem "Solve me first" in which i solved sum of two numbers using python3. In this i learned about various coding platform and how it helps in level up our skill.

Part B: Google Workspace Collaboration:
In Part B, I created a Google Form with 5 questions which contain multiple choice questions and short answers named 'Digital Literacy Awareness Quiz' for my batchmates and using Google Sheet in which we can see the responces of others. In this i learned about integration of google workspace and how it works in synchronization. Google Forms and Sheets will help me conduct surveys, collect feedback, and manage data efficiently for assignments and group projects.

Overall, these platforms enhance both my technical skills and my ability to collaborate and organize academic work effectively.

Task 4:Draft a Professional Email & Etiquette Guide

A common example of poor digital communication causing problems is when a student sends an email to a professor without a clear subject line, proper greeting, or complete information. For instance, a vague message like “Send me the assignment details” can be seen as rude or unclear, leading to misunderstandings or no response at all. In some cases, such unprofessional communication may even affect the student’s reputation or relationship with the professor.

This situation could have been handled better by following proper email etiquette. The student should include a clear subject line, a respectful greeting, and a well-structured message explaining their request politely. Providing necessary details and using a professional tone would make the communication more effective. Overall, clear, respectful, and structured digital communication helps avoid confusion and builds a positive impression in academic and professional environments.

Task 5:Cybercrime Awareness Case Study & Prevention Guide

In this task I study about the Digital arrests in India. While researching about this I also came across various cybercrime, what surprised me the most was how simple and convincing many scams are, especially phishing and UPI frauds. Attackers often use messages or calls that appear completely legitimate, making it easy for even aware users to fall victim. I also learned that many victims lose money not because of technical weaknesses, but due to small mistakes like sharing OTPs or clicking on unsafe links. I think this problem can be solved by spreading awareness through campaign and through education in schools from younger age.

One habit I will personally change is being more cautious before clicking on any links or responding to urgent-looking messages, even if they seem to come from trusted sources. I will always verify the sender and avoid sharing sensitive information such as passwords, OTPs, or banking details. This awareness will help me stay safer online and also guide others to avoid similar threats.

Conclusion

This project has significantly enhanced my understanding of the digital world and my responsibilities as a Student Digital Ambassador. I learned how to create and maintain professional online profiles, practice coding, collaborate using cloud tools, and communicate effectively through email and social media. Importantly, I became more aware of online threats like phishing and UPI fraud and how to prevent them. Overall, the project helped me develop practical skills, digital confidence, and a sense of responsibility for guiding peers. These learnings will not only support my academic and professional growth but also enable me to promote safe and professional online practices among students.
